Design Process

In order for us to provide a proposal, we will need to visit you for a consultation. This visit gives us the opportunity to view the area concerned and to discuss what you would like to achieve from the garden. It also allows us to present a number of different options and ideas to you, using our portfolio of plans and photographs to help you visualize our suggestions

Site survey and analysis

This includes taking Measurements and establishing levels across the site together with a full photographic survey. We will inspect your soil conditions, site orientation, any prevailing winds and evaluate your existing planting.

Concept Design

Our drawing will show the proposed layout of the garden and the positioning of existing and new elements within it. This will also illustrate the shapes of areas of planting and individual trees, without detailing the plants that will be used. design in more detail. Once this drawing is completed, We will arrange a meeting to view the proposals, and discuss the proposed then design more detail

Final Design and Plant Schedule

This plan is the final design drawing and includes full hard and soft landscaping details. It is a scale drawing and has all the information necessary to construct and plant your garden, it will be supported by a detailed planting schedule listing all trees, shrubs, herbaceous plants and bulbs as specified in the final design drawing with sizes, quantities and prices for supply by us.
